

# PEACCI

## The Peacci "Essentials" Kit

EVERYTHING YOU NEED FOR THE PERFECT AT-HOME MANICURE

**The GelBottle nail file:** File in one direction only to get your nails into a smooth shape ready for painting. Whether you love rounded, squared or coffin – this is the file for you.

**Peacci cuticle remover gel:** a step often skipped in an at-home manicure, cuticle remover gel is the KEY to getting a professional finish without leaving the front-room. Trust us when we say this is a GAMECHANGER to being able to achieve neat application – no matter your previous relationship with nail polish. Paint the remover gel over your cuticle and leave for 30 seconds. Then use a cuticle pusher to push them back (and scrape away any dead skin), wiping away any excess with a tissue. The result? No flaky dead skin or hangnails, with a larger, cleaner and smoother surface to allow you to paint without catching polish on your finger.

**The GelBottle Cuticle pusher:** use this as directed above, alongside your Peacci cuticle remover gel. For tips that are prepped and ready for polish!

**Peacci 2in1 base coat:** a smoothing base coat and nail primer all in one. A base coat will not only increase the longevity of your at-home manicure, but it will also improve the final finish. Peacci 2in1 is applied in one fast-drying coat, to prep and prime the nail ready for *smoooooth* application.

**Peacci colour:** You've never seen pigment like it from regular nail polish. Peacci has over 130 shades to choose from that promise to cater to every style – from the perfect sheer pink, a variety of nudes to classic reds, unapologetically bold neons and electrifying glitters. Apply two coats for longer lasting results.

**Peacci Gel'ous top coat:** Now THIS is where the magic happens. Gel'ous top coat doesn't just seal in your polish, allowing it to last longer and protect against chips – a generous coat of Gel'ous utilises gel polish qualities to achieve a shine which will have you saying "I can't believe this isn't gel." Whilst the top coat will dry normally like a regular polish, you can also dry it in sunlight to watch it cure like gel polish, providing a hard, shiny finish which is truly unrivalled. Apply a generous coat when your Peacci colour is dry.

**Peacci cuticle oil:** For a final touch, finish with a wipe of our juicy, peach scented cuticle oil when your top coat has dried. Using a combination of hydrating oils, paint a small lick of Peacci oil onto your cuticles and massage it in for a hydrated, professional finish that encourages your nails to stay healthy and strong! An essential to keep hands hydrated that are dried out from repeated use of hand-sanitizer.
